

Post 16 Students - to set up an NHS Account in order to register Lateral Flow Testing Kits

Scan the QR Code and set up an account answering all the questions to set up an account for yourself to register test kits. The site ID is

SLYS

Each time you test in school you will need to go to the Hollick Hall where you will be allocated a swab stick, processing fluid and a bar code.

After processing the swab, and whilst waiting for a control line on the lateral flow device you need to register the kit you are using to the account that you have set up for this. The QR code will take you to your NHS account to log in and then, using the barcode you were given with the kit (which you can scan on your phone) register your test and then stick the barcode on the rear of the device. On the front of the device record your initials and the time that you started processing the sample; take the device to the logging area. Staff will check the devices and you will be notified of the outcome as soon as we have logged the result on the NHS site.
